

# SECURE GROUP CHAT AND CONFERENCING TOOLS

Last update: 30 Aug 2020

\* With end-to-end encryption (e2ee), your message gets encrypted before it leaves your device and only gets decrypted when it reaches the intended recipient's device. Using e2ee is important if you plan to conduct sensitive communication like internal team or partners meetings.

With to-server encryption your message gets encrypted before it leaves your device, but is being decrypted on the server, processed, and encrypted again before being sent to recipient(s).
